-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 03 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on Amendment filed on 11/08/2004.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-47 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-47 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-2, 10-11, 18-19, 27-29, 37-39 and 47 are rejected under 35 U.S.C. 102(e) as being unpatentable by Keskitalo et al., US patent No. 6,212,406, hereafter referred to as Keskitalo.

Regarding claims 1, 11, 18, 28 and 38, Keskitalo discloses a method and system for providing angular diversity, and base station equipment. Keskitalo teaches a base station including means for searching for the incoming directions (α) and delays (ζ) of the received signal components (col. 4, lines 3-5; col. 6, lines 17-22; col. 7, lines 1-3) (determining propagation characteristics of said plurality of channels). Furthermore, Keskitalo discloses that a receiver detects the direction and code phase of the reception

Art Unit: 2667

of the best signals. The receiver thus knows at all times the directions from which the best signal components from the mobile stations are received. This information can also be used in the base station equipment according to the invention in the downlink direction (col. 7, line 57-col. 8, line 3). It indicates that the system the best spreading code is selected and assigned to the wireless terminals based on said propagation characteristics (α , ζ).

Regarding claims 2, 19, 29 and 39, the method disclosed by Keskitalo inherently chooses a wireless terminal to assign spreading codes to the plurality of wireless terminals because the system monitors and measures uplink and downlink signal between the base station and the mobile terminals (choosing a target wireless terminal; and assigning a spreading code to said target wireless terminal).

Regarding claims 10, 27, 37, and 47, since the system disclosed by Keskitalo is a CDMA system, it has to transmit spreading codes to the mobile terminals.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

a. Claims 3-5, 7, 12-14, 16, 20-22, 24, 30-32, 34, 40-42 and 44 are rejected under 35 U.S.C. 103(a) as being unpatentable over Keskitalo et al., US patent No. 6,212,406, in view of Magnusson et al, US Patent No. 6,163,524, hereafter referred to as Keskitalo and Magnusson respectively.

Regarding claims 3-5, 12-14, 20-22, 30-32 and 40-42, Keskitalo only discloses the system searches the best code for assigning to the terminal; col. 6, lines 17-29; col. 7, lines 57-65. Keskitalo does not teach that the code is searched randomly. However, Magnusson discloses that the codes can be allocated randomly from the available eligible codes. It would have been obvious to one of ordinary skill in the art at the time the invention was made to adapt randomly search method disclosed by Magnusson into Keskitalo's system in order to improve the quality of service because the best code signal is quickly detected. Since voice service is an interactive service, therefore, it requires a minimum time delay value during a service. Thus, the service is improved when the best code signal for assigning to the mobile phone is quickly detected.

Regarding claims 7, 16, 24, 34 and 44, Keskitalo disclose that the best code signal is selected and assigned to a mobile phone based on time of arrival combined with direction of arrival col. 6, lines 17-29; col. 7, lines 57-65. Therefore, it implies that Keskitalo's system performs a gradient search of transmission delays for the improved code.

b. Claims 6, 8, 15, 17, 23, 25, 33, 35, 43 and 45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Keskitalo et al., US patent No. 6,212,406, in view of Magnusson et al, US Patent No. 6,163,524 and further in view of Easton, US Patent No. 5,764,687 hereafter referred to as Keskitalo, Magnusson and Easton respectively.

Regarding claims 6, 15, 23, 33 and 43, Keskitalo teaches that the system performs a gradient search of code signal, but does not teach the search is performed in a space area surrounding improved code. However, Easton discloses a system,

Art Unit: 2667

which searches all area of the signals by search windows (col. 11, line 54 – col. 12, line 2; col. 13, line 66 – col. 14, line 11). Therefore, the system disclosed by the Easton inherently searches in the signal space area surrounding the improved code. It would have been obvious to one of ordinary skill in the art at the time the invention was made to adapt the searching method disclosed by Easton into Keskitalo's system for the same purpose as mentioned in claim 3.

Regarding claims 8, 17, 25, 35 and 45, Keskitalo teaches that the system performs a gradient search of code signal, and the best code signal is selected and assigned to a mobile phone based on time of arrival combined with direction of arrival (α , ζ). Keskitalo does not teach the search is performed in a space area surrounding improved code. However, Easton discloses a system, which searches all area of the signals by search windows (col. 11, line 54 – col. 12, line 2; col. 13, line 66 – col. 14, line 11). It would have been obvious to one of ordinary skill in the art at the time the invention was made to adapt the searching method disclosed by Easton into Keskitalo's system for the same purpose as mentioned in claim 3.

c. Claims 9, 26, 36 and 46 are rejected under 35 U.S.C. 103(a) as being unpatentable over Keskitalo et al., US patent No. 6,212,406, in view of Dent, US Patent No. 5,831,977, hereafter referred to as Keskitalo and Dent respectively.

Regarding claims 9, 26, 36 and 46, Keskitalo does not clearly disclose limitations recited in these claims. However, the base station in the system disclosed by Dent receives a plurality codes signals from the mobile phones to process received signals. It implies that the base station has to maintain a processing set of the plurality of mobile

phones for processing. In addition, Dent's system uses CDMA technique; therefore, each mobile telephone is assigned a particular code for communication (individually assigning codes to said wireless terminals in said processing set). Furthermore, Dent discloses that a channel tracker determines which of the times-of-arrival combined with which directions-of-arrival contain the most energy and combines these signals using for example the aforementioned inventive RAKE combiner having quantized coefficients. When the largest value has been found, its value is returned to the channel tracker to update the coefficient in time for the next symbol period; fig. 4; col. 10, lines 15-50. After the largest value has been determined for a particular mobile phone, the system determines coded signals for another mobile phone (adding a wireless terminal to said processing set when said step of individually assigning codes to said wireless terminals in said processing set has converged and repeating said step of individually assigning codes). It would have been obvious to one of ordinary skill in the art at the time the invention was made to adapt the searching method disclosed by Dent into Keskitalo's system for improving searching the best code procedure.

Response to Arguments

Applicant's arguments filed 11/08/2004 have been fully considered but they are not persuasive.

Regarding claim 1, pages 10-11, Applicant argues that the reference does not teach the limitation recited in claim 1 "assigning spreading codes to said plurality of wireless terminals based on said estimated propagation characteristics of said channels". Examiner respectfully disagrees. Applicant is directed to figures 6-7 and

col.10, line 45-col. 13, line 17, wherein the reference discloses the searcher 604 provides propagation parameters (time delay, angle of arrival, power...) to the controller 612. The base station controller controls the operation of the receiver, such as allocation of the channel units to different connections.

Similarly, arguments regarding claims 2-47 are not persuasive for the same reasons as explained above with respect to claim 1.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thai D Hoang whose telephone number is (571) 272-3184. The examiner can normally be reached on Monday-Friday 10:00am-18:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chi Pham can be reached on (571) 272-3179. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
